Grooved fittings are a type of mechanical connection device used in piping systems to join two sections of pipes or to connect pipes with other components such as valves, pumps, or meters. They consist of a fitting body with an internal groove or series of grooves that are designed to mate with a corresponding groove machined on the ends of the pipes. These fittings are typically made from durable materials like ductile iron, stainless steel, or other metals, depending on the application requirements. Once the pipes are positioned within the fitting, a coupling or clamp is used to secure the fitting around the pipes, creating a tight and reliable connection. Grooved fittings offer several advantages, including ease of installation as they do not require complex threading or welding processes, and they can accommodate some degree of misalignment between pipes. They are commonly employed in various industries, such as plumbing, fire protection, industrial piping, and HVAC systems, where a secure and leak-proof connection is essential for the proper functioning of the system.
