According to our (Global Info Research) latest study, the global Ground Calcium Carbonate market size was valued at USD 12190 million in 2023 and is forecast to a readjusted size of USD 21200 million by 2030 with a CAGR of 8.2% during review period.

Calcium carbonate is one of the most abundantly occurring minerals on earth and composes nearly four percent of earth's crust. It exists naturally in the form of limestone, marbles and chalk formed by sedimentation over a period of time. It is one of the most versatile compounds and finds a variety of applications across a diverse set of industries including construction, steel, and agrochemicals among others.

The increasing demand from packaging and tissue paper application is identified as one of the primary growth factors for this market. The demand for ground calcium carbonate in packaging and tissue paper application is rapidly gaining prominence. Ground calcium carbonate is used in this segment as it creates a porous base on the sheet of paper, due to its rhombohedral particle shape. Moreover, the ground calcium carbonate is hydrophobic and it releases water rapidly. Also, the tissue paper market is constantly growing with the rise in number of quick service restaurant (QSR), food and beverages (F&B) chains, and other associated outlets. These facilities prefer disposable napkins and paper towels since they do not require washing and eliminate the need for labor and are more hygienic when compared to their conventional cloth counterparts. This will in turn, propel the demand for ground calcium carbonate in the coming years.

The Global Info Research report includes an overview of the development of the Ground Calcium Carbonate industry chain, the market status of Paper (Top Size,
