Abstracts

The global Ground-Mounted Photovoltaic Inverter market size is expected to reach \$ 1214 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global production of ground-mounted photovoltaic (PV) inverters reached 39,129.5 MW, with an average selling price of \$20/kW. The global annual production capacity of ground-mounted PV inverters was approximately 50,000 MW, with a gross profit margin of approximately 22.5%. Ground-mounted PV inverters are key equipment in photovoltaic power generation systems, primarily used to convert the direct current (DC) generated by photovoltaic panels into alternating current (AC) to supply the grid or directly to users. The upstream of ground-mounted PV inverter production includes semiconductor devices, capacitors and inductors, transformers, and magnetic components. The midstream consists of ground-mounted PV inverter manufacturers, while downstream applications are mainly in the energy, construction, and industrial sectors.

The ground-mounted photovoltaic inverter market is generally characterized by 'installation-driven growth + accelerated technological iteration + normalized price competition': Driven by domestic policies and overseas demand, ground-mounted power plants continue to be built, and inverter demand is steadily increasing; at the same time, the industry is evolving from traditional centralized/conventional string configurations to higher efficiency, stronger grid connection capabilities (such as reactive power regulation and low voltage ride-through), lower operation and maintenance costs, and stronger remote monitoring, prompting manufacturers to increase investment in power device selection, heat dissipation and reliability design, intelligent protection, and grid operation and maintenance; however, affected by supply

chain cost fluctuations, homogeneous competition, and increased concentration in project bidding, product price pressure remains, and profit margins are relatively under pressure; overall, manufacturers with large-scale delivery capabilities, stable reliability, and grid adaptability are more likely to gain market share in the competition, and future growth will come more from high-quality projects and system-level delivery capabilities.
