The global Ground Solar Inverter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Ground Solar Inverter is a device that converts DC power generated by solar photovoltaic panels into AC power. It is usually installed in solar power stations on the ground and is used to convert the direct current generated by the photovoltaic panels into alternating current suitable for transmission to the grid. The main function of the inverter is to convert DC power into AC power and ensure that the output current and voltage meet the requirements of the grid. The Ground Solar Inverter also has monitoring and protection functions, which can monitor the operating status of the solar power generation system and provide protection and alarm when a fault or abnormal situation occurs.
