Abstracts

According to our (Global Info Research) latest study, the global Ground Station as a Service (GSaaS) market size was valued at US\$ 1493 million in 2025 and is forecast to a readjusted size of US\$ 3917 million by 2032 with a CAGR of 14.9% during review period.

Ground Station as a Service (GSaaS) refers to the transformation of satellite ground stations, originally built by aerospace agencies or enterprises, into a shareable and subscribed infrastructure service through cloudification, networking, and on-demand scheduling. Users no longer need to build their own ground station networks; instead, they rent globally distributed ground station resources via internet interfaces on a time or data volume basis, enabling real-time reception, storage, and processing of satellite data. This significantly reduces ground infrastructure costs and improves satellite mission scheduling efficiency.

With the explosive growth of low-Earth orbit (LEO) satellite constellations, the global demand for high-frequency, low-latency, and globally covered ground station access is rapidly increasing. Traditional self-built ground station models can no longer meet these demands in terms of cost, coverage, and flexible scheduling. GSaaS, through cloud computing and distributed antenna networks, enables satellite operators to achieve "plug-and-play" terrestrial communication capabilities, significantly improving downlink data efficiency and reducing capital expenditure (CAPEX). In the future, with the development of 5G NTN (non-terrestrial networks), real-time Earth observation, defense monitoring, and commercial aerospace, GSaaS will become an important component of satellite internet infrastructure and will gradually evolve into a "global ground station cloud network platform," possessing infrastructure-level growth potential similar to cloud

computing IaaS.
