According to our (Global Info Research) latest study, the global Group B Streptococcus Culture Medium market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Group B Streptococcus (GBS), also known as Streptococcus agalactiae, is a gram-positive coccus and is the primary pathogenic bacteria causing invasive infections such as neonatal sepsis and meningitis. The bacterial culture identification method of anorectal/vaginal secretions is the traditional method for GBS screening. The 'Guidelines for the Prevention of Peripartum Group B Streptococcus Disease' promulgated by the US CDC in 2010 and the 2015 European Consensus both consider selective broth enrichment. Culture identification is the preferred standard method. Bacterial culture takes a long time, and inspectors need a certain period of technical training, which limits the routine development of some clinical laboratories. With the development of biotechnology in recent years, many new detection methods have emerged that are easy to operate, highly sensitive, short in detection time, easy to judge the results, or capable of automated interpretation.

The Global Info Research report includes an overview of the development of the Group B Streptococcus Culture Medium industry chain, the market status of Hospital (Broth Enrichment Culture Method, Direct Culture Method), Lab (Broth Enrichment Culture Method, Direct Culture Method), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Group B Streptococcus Culture Medium.
