## Abstracts

According to our (Global Info Research) latest study, the global Group B Streptococcus Detection and Analysis market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The scientific name of GBS is *Streptococcus agalactiae*, also known as group B Streptococcus. It normally lives in the vagina and rectum. It is an opportunistic pathogenic bacteria. Invasive infections are most common in neonates, the elderly, and those with predisposing factors (i.e., pregnancy, diabetes, and immunocompromise). Generally, GBS infection in normal healthy people does not cause illness. According to research, about 10% to 30% of pregnant women have GBS vaginally resident, and 40% to 70% of them will be passed to their newborns during delivery. If newborns carry GBS, about 1% to 3% will develop early invasive infection, of which 5% will lead to death. Infections in pregnant women manifest as bacteremia, urinary tract infection, fetal membrane infection, endometrial infection and wound infection.
