Growing Bench Systems are specialized structures used in agriculture and horticulture to support and organize plant growth, typically in controlled environments such as greenhouses or indoor farming. These systems elevate plants above the ground, often in a tiered or modular layout, to maximize space and improve accessibility for maintenance, harvesting, and environmental control. They can be equipped with features like automated irrigation, lighting, and temperature regulation, promoting more efficient plant growth and higher yields by optimizing the growing conditions. Growing Bench Systems are commonly used in hydroponics, vertical farming, and other modern farming practices.
