Abstracts

Growth factor is natural substances produced by the body (hormones) or obtained from food (vitamins, minerals) that promote growth and development by directing cell maturation and differentiation and by mediating maintenance and repair of tissues; abnormalities in growth factors may be involved in benign and malignant neoplasia.

SCOPE OF THE REPORT:

This report focuses on the Growth Factors (Blood and Tissue) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Growth factors are group of proteins, which play an important role in the stimulation of cellular differentiation and cell division in the human body. There are different kinds of growth factors present in the human body. Some of the major growth factors include insulin-like growth factors, platelet-derived growth factors, epidermal growth factors, and nerve growth factor. Moreover, some cytokines, such as small proteins secreted by one cell to regulate the function of another cell, also act as growth factors.

Growth factors are mainly used in the treatment of chronic diseases, such as anemia, renal disorders, cancer, etc. For instance, erythropoietin, which stimulates the growth of Red Blood Cells (RBCs), is used to treat anemia. Granulocyte-Macrophage Colony-Stimulating Factor (GM-CSF) and Granulocyte Colony-Stimulating Factor (G-CSF) are involved in the stimulation of White Blood Cells (WBCs) in cancer patients. However, abnormal production of growth factors causes several diseases.

The worldwide market for Growth Factors (Blood and Tissue) is expected to grow at a

CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
