## Abstracts

Antennas are specialized transducers that convert RF wave fields into alternating current (AC) or vice-versa. There are two basic types of antennas, a receiving antenna, which intercepts RF energy and delivers AC to electronic equipment, and the transmitting antenna, which absorbs AC from electronic equipment and generates an RF field. Similarly, like any wireless communication system, mobile communication is also dependent on GSM antennas. GSM services are in constant need of custom antenna designers to help them keep up with customer demand and to introduce new innovations and functions to the marketplace.

### Scope of the Report:
