Abstracts

According to our (Global Info Research) latest study, the global GSM Antenna market size was valued at USD 1842.7 million in 2023 and is forecast to a readjusted size of USD 2428.1 million by 2030 with a CAGR of 4.0% during review period.

Antennas are specialized transducers that convert RF wave fields into alternating current (AC) or vice-versa. There are two basic types of antennas, a receiving antenna, which intercepts RF energy and delivers AC to electronic equipment, and the transmitting antenna, which absorbs AC from electronic equipment and generates an RF field. Similarly, like any wireless communication system, mobile communication is also dependent on GSM antennas. GSM services are in constant need of custom antenna designers to help them keep up with customer demand and to introduce new innovations and functions to the marketplace.

The constant changes in GSM technologies will be one of the major factors that will have a positive impact on the global GSM antenna market during the forecast period. The constant changes in GSM technologies will drive the GSM antenna market during the forecast period. Antennas must be replaced to support the newest GSM systems to meet their spectrum and frequency necessities. This will increase the need for upgradation of new technologies every five to seven years and the GSM antennas will witness increased demand to meet different consumer requirements. Also, with the forthcoming 5G technology in 2019, the sale of GSM antennas will increase in the market. These continuous changes in GSM technology is a solid driver for the GSM antenna market.
