Using GTEM (Gigahertz Transverse Electro Magnetic) for electromagnetic compatibility testing is a new measurement technology developed in the international electromagnetic compatibility field in recent years. Due to GTEM's wide-band characteristics (from DC to microwave) and low cost (only a few percent of the cost of an anechoic chamber), it can be used for electromagnetic radiation sensitivity tests (EMS tests. Sometimes also called immunity tests), and It can be used for electromagnetic radiation testing (EMI testing) and the instrument used (compared to testing in an anechoic chamber) has the characteristics of simple configuration, low cost and can be used for rapid and automatic testing, so it is increasingly favored by relevant international and domestic people. Pay attention to. Especially for testing small equipment, the measurement solution of GTEM chamber is a test solution with high performance and low price.
