Abstracts

A Goods-to-Person Pick Station is a system that automatically provides stock and collection containers to workers. The operator simply follows the instructions on the display and picks the required quantity from the stock containers provided to the collecting container. This ease of operation makes the system less prone to variations in productivity due to the skill level of the operator. Compared with cart picking, there is no need to walk around to find shelves, which improves work efficiency and reduces the physical burden of workers.
