## **Abstracts**

Guidance and auto-steering systems for farm machines are advanced technological solutions designed to improve the efficiency and accuracy of agricultural operations. These systems utilize GPS (Global Positioning System) technology to precisely navigate agricultural machinery such as tractors, combines, and sprayers across fields. By integrating GPS data with software algorithms, guidance systems can create accurate field maps, optimize route planning, and ensure consistent spacing and coverage during planting, spraying, and harvesting activities. Auto-steering capabilities enable the machinery to automatically follow predefined paths or contours, reducing operator fatigue and minimizing overlaps and skips in field operations.
