According to our (Global Info Research) latest study, the global Gun Powder market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gun powder was invented by Chinese alchemists in the 9th century. Gun powder is a mixture of chemical substances including sulfur, charcoal, and wallpaper. Gunpowder is also known as black powder. Gunpowder is a low-explosive substance that is used as a propellant in firearms. The sulfur and charcoal act as fuels while the saltpeter is an oxidizer. Owing to its incendiary properties and the amount of heat and gas volume that it generates, gunpowder has been widely used as a propellant in firearms, artillery, rockets, and fireworks and as a blasting powder in quarrying, mining, and road building. Gunpowder is distinguished from 'high' explosives—dynamite and TNT because of its lower burning speed that produces a slower pressure wave, which is less likely to damage the barrel of a gun. Gunpowder is frequently used as an ingredient in fuses, both for fireworks and explosives.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
