## Abstracts

The global Gutta Percha Point for Endodontic Treatment market size is expected to reach \$ 112 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

In 2025, global Gutta Percha Point for Endodontic Treatment production reached approximately 5,420 k units with an average global market price of around US\$ 15 per unit, and a gross profit margin of approximately 10%-30%. Gutta percha points for endodontic treatment are standardized, cone-shaped root canal filling materials used to obturate the cleaned and shaped root canal space after removal of the dental pulp. They are manufactured primarily from gutta-percha, a natural trans-polyisoprene polymer derived from the latex of Palaquium trees, blended with zinc oxide, radiopacifiers such as barium sulfate, waxes and resins to achieve the required plasticity, dimensional stability and radiopacity. Commercial points (also called cones) are produced in ISO-standardized tip sizes and tapers to match nickel-titanium preparation files, and may be hand-rolled, machine-rolled or injection-molded to fine dimensional tolerances according to ISO 6877. In the upstream segment, the value chain starts with producers of raw gutta-percha from natural latex, predominantly in Southeast Asia, and suppliers of compounding ingredients such as zinc oxide, radiopacifiers (barium sulfate), pigments, waxes and resins used to adjust flow and mechanical behavior. In the midstream, specialized dental material and endodontic companies formulate gutta-percha compounds, extrude rods, and then convert them into cones by hand-rolling, machine-rolling or injection-molding, followed by cutting, color-coding, length marking and packaging into vials or slide boxes. Major midstream players integrate gutta-percha point production with broader endodontic portfolios (files, sealers, paper points), designing ?system-matched? cones that reproduce the exact taper and tip dimensions of their NiTi file systems and validating dimensional tolerances and radiopacity through in-house or third-party testing. In the downstream, products flow

via dental distributors, e-commerce platforms and direct manufacturer sales into general dental practices, endodontic specialty clinics, hospital dental departments, dental service organizations (DSOs), and dental schools. Distributors often stock multiple brands and taper systems, while clinicians increasingly demand cones that match their preferred file systems and obturation techniques.
