According to our (Global Info Research) latest study, the global Gypsum Recycling Service market size was valued at US\$ 923 million in 2025 and is forecast to a readjusted size of US\$ 1412 million by 2032 with a CAGR of 6.2% during review period.

Gypsum recycling services refer to the specialized services of collecting, sorting, crushing, removing impurities, calcining, and reprocessing gypsum from building demolition, decoration waste, and industrial by-products, transforming it into reusable gypsum powder or raw materials for gypsum products. This service uses mechanical sorting and heat treatment technologies to remove paper, metal, plastic, and impurities, achieving a purity of 90%-95% in recycled gypsum, meeting the requirements of building materials and industrial applications. Its main goal is to reduce reliance on natural gypsum mining, decrease landfill volume, and achieve resource recycling. It is widely used in the production of building gypsum board, cement retarders, plastering materials, and some industrial ingredients. Gypsum recycling services are typically provided by environmental protection and solid waste treatment companies, covering recycling, transportation, treatment, and resale. Driven by green building, circular economy, and carbon reduction policies, it is gradually becoming an important part of the building materials and environmental protection industry chain.

From a market perspective, gypsum recycling services are currently in a growth phase driven by both policy and environmental demand. With the rapid increase in construction demolition and renovation waste, and the growing pressure on urban solid waste disposal, gypsum recycling has become a crucial way to reduce landfill volume, conserve natural gypsum resources, and achieve a circular economy. Government policies supporting construction waste reduction, the application of recycled building

materials, and green construction provide institutional guarantees and economic incentives for the industry's development.

From an industry structure perspective, the market is shifting from fragmented, localized services to a concentration of large-scale, specialized enterprises. Companies with complete recycling, processing, reprocessing, and sales chains have a competitive advantage. Meanwhile, technological upgrades, such as efficient sorting, impurity removal, and optimized calcination processes, are also important factors for differentiated competition.

From a demand-driven perspective, downstream industries such as gypsum board production, cement retarders, plastering materials, and some industrial applications are experiencing stable growth in demand for recycled gypsum, especially in new construction and renovation projects where the preference for environmentally friendly materials has significantly increased. Future business opportunities are mainly concentrated in the integration of urban construction waste treatment, the supply of high-purity recycled gypsum, and the promotion of green building materials applications. The industry has long-term and steady growth potential, while also supporting the goals of energy conservation, emission reduction, and carbon neutrality.
