Gyratory Compactors are specialized machines used in the preparation of asphalt concrete specimens for laboratory testing. They simulate the compaction process that occurs in the field, allowing for the evaluation of the density and stability of asphalt mixtures. Gyratory compactors use a rotating and oscillating motion to compact asphalt samples in a cylindrical mold. This mimics the traffic loads that asphalt pavements experience over time. Primarily used in the design of asphalt mixtures, helping to determine optimal binder content and aggregate gradation. Essential for producing samples for various performance tests, such as stability, flow, and durability assessments.
