According to our (Global Info Research) latest study, the global Gyrotory Sieve Shaker market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Gyrotory sieve shaker is an apparatus used in laboratories to perform particle size analysis and grading of granular materials. It consists of a stack of sieves with progressively smaller openings, placed on a gyrotory motion platform or shaker. The shaker oscillates or gyrates, causing the particles to move laterally and vertically as they are sieved. This motion helps in efficiently separating particles based on their size and ensuring accurate grading of the material. It finds applications in various industries, such as construction, mining, pharmaceuticals, and agriculture.
