According to our (Global Info Research) latest study, the global H-bridge Motor Controllers market size was valued at US\$ 3955 million in 2024 and is forecast to a readjusted size of USD 5717 million by 2031 with a CAGR of 5.5% during review period.

H-bridge drivers are a long established means for enabling bidirectional motor driving. By using one, rotation of the motor can be driven, and the polarity of the supply to the motor can be swapped in order to change the direction of rotation. It can also take care of braking, when this is required.

An H-bridge is an electronic circuit that switches the polarity of a voltage applied to a load. These circuits are often used in robotics and other applications to allow DC motors to run forwards or backwards. The name is derived from its common schematic diagram representation, with four switching elements configured as the branches of a letter 'H' and the load connected as the cross-bar.
