H13 Tool Steel is a chromium-molybdenum-vanadium hot work tool steel renowned for its high-temperature strength, thermal fatigue resistance, and hardenability, making it the premier choice for die-casting, forging, and extrusion molds. It retains superior hardness and wear resistance under extreme heat while resisting thermal cracking and tempering softening, ideal for cyclic heating/cooling conditions. Advanced refining processes like electroslag remelting (ESR) enhance its purity and microstructural uniformity to extend mold life. Widely used in automotive die-casting molds, aluminum extrusion dies, and plastic injection molds, H13's performance directly impacts forming efficiency and part quality, solidifying its role as an indispensable material in high-end manufacturing.
