Abstracts

According to our (Global Info Research) latest study, the global HAE Treatments market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

HAE (Hereditary Angioedema) treatments aim to manage and prevent the unpredictable and potentially life-threatening swelling episodes associated with the condition. These treatments target the underlying cause: a deficiency or dysfunction of C1 esterase inhibitor (C1-INH), which leads to uncontrolled activation of the complement and kallikrein-kinin systems, resulting in swelling. There are three main categories of HAE treatments: C1-INH replacement therapies (e.g., Berinert, Haegarda) that restore functional C1-INH levels; kallikrein inhibitors (e.g., Ecallantide) that block the enzyme responsible for bradykinin production; and bradykinin B2 receptor antagonists (e.g., Icatibant) that prevent bradykinin from causing vascular permeability and swelling.

This report is a detailed and comprehensive analysis for global HAE Treatments market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
