Abstracts

Hair dye baking ointment is a chemical product used to dye hair, often to change the color of the hair or to cover gray hair. It is a hair dye that changes the color of your hair by reacting with the hair cuticles and depositing the dye inside the hair. Hair dye baking ointment usually consists of hair dye, oxidizing agent, hair care ingredients and other chemicals. When mixed together, these ingredients form a uniform, ointment-like substance that can be easily applied to the hair. When using hair dye baking ointment, the user applies the ointment evenly to clean hair and then waits for a certain amount of time for the dye and oxidizer to work. Afterwards, the hair is washed thoroughly to remove excess dye and chemicals to achieve the desired result. The types and formulas of hair dye baking ointments vary by brand and product, and users can choose the appropriate product based on their needs and preferences. During use, it is recommended to follow the instructions on the product manual and conduct a skin sensitivity test before use to ensure safety.
