According to our (Global Info Research) latest study, the global Hair Drug Detector market size was valued at US\$ 8676 million in 2024 and is forecast to a readjusted size of USD 12240 million by 2031 with a CAGR of 5.0% during review period.

The hair drug detector is a scientific instrument used to detect drug components in human hair. The hair drug detector collects and analyzes drug components in human hair (such as hair, armpit hair, leg hair, etc.) to determine whether the person being tested has drug use. This detection method uses the principle that after drugs enter the human body, they will enter the hair follicles through blood circulation and be fixed by the keratin in the hair. Therefore, the hair drug detector can detect drug use history over a long period of time, and has a longer detection time than traditional urine and blood tests.
