## Abstracts

According to our (Global Info Research) latest study, the global Half-Cell Potential Test market size was valued at US\$ 1595 million in 2024 and is forecast to a readjusted size of USD 3273 million by 2031 with a CAGR of 10.9% during review period.

The half-cell potential test is an electrochemical corrosion assessment technique that measures the electrochemical potential (voltage) of a metal's surface relative to a reference electrode. This measurement is used to evaluate the likelihood of corrosion and the effectiveness of protective coatings on metal structures. The test is based on the concept that corrosion potential ( $E_{corr}$ ) is a key indicator of the corrosion susceptibility of a metal.

The use of digital tools, including mobile apps and cloud-based platforms, for data collection, analysis, and reporting has been growing. These digital solutions streamline the half-cell potential test process, enhance data management, and enable real-time collaboration among field technicians and corrosion experts.
