Abstracts

According to our (Global Info Research) latest study, the global Hall Sensor IC market size was valued at US\$ 1740 million in 2024 and is forecast to a readjusted size of USD 2966 million by 2031 with a CAGR of 8.0% during review period.

Since the voltage obtained by the Hall element from the element itself is very small, it is generally necessary to configure an amplifier circuit such as an operational amplifier. The Hall sensor chip is a product that integrates a Hall element and an operational amplifier, so the number of external parts can be reduced and circuit design can be easily performed.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
