As a new broad-spectrum anti coccidiosis drug, Halofuginone has the advantages of small dosage and no cross resistance with other anti coccidiosis drugs. The product has obvious inhibitory effect on the early reproductive spores and the first and second generation schizonts of coccidia, and can control the oocyst discharge, reducing the possibility of reinfection. The peak period of action was 2 to 3 days after infection. The product has strong inhibition effect on 6 kinds of chicken Eimeria and 2 kinds of turkey Eimeria which are the most harmful, and it also has inhibition effect on rabbit Eimeria. Its anti coccidiosis activity is higher than polyether antibiotics. It is also effective against Sarcocystis ovis and Pyroplasma taylor.
