The global Halogen-Free, Non-flame-Retardant Heat Shrink Tubing market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Halogen-free, non-flame-retardant heat shrinkable tubing is a tube made of special plastic material used for high-temperature-resistant and flame-retardant applications. It is widely used in industries such as electronics, automotive and aerospace to protect wires, cables and other components from high temperatures, flames and other potential hazards. The heat shrink tubing is made of halogen-free materials and does not contain halogen elements such as chlorine or bromine, which release harmful toxic gases when burned. Compared with traditional halogen-containing heat shrink tubing, halogen-free, non-flame-retardant heat shrink tubing is safer and more environmentally friendly.
