Halogen-free Parylene is a high-performance polymer material known for its excellent electrical insulation, chemical stability, and heat resistance. Free of halogens, it is more environmentally friendly and meets the demand for green materials in modern electronic products. This material is commonly used as a protective coating for electronic components, sensors, and medical devices, effectively preventing moisture, oxygen, and other harmful substances from entering, thereby extending the lifespan of the equipment. Due to its superior thin-film coating properties, halogen-free Parylene is widely used in the packaging and protection of high-end electronic products.
