Abstracts

The global Halogen Free Refrigerants market size is expected to reach \$ 778.4 million by 2030, rising at a market growth of 10.0% CAGR during the forecast period (2024-2030).

With the increasing environmental awareness, the demand for Halogen Free Refrigerants will continue to increase. Since Halogen Free Refrigerants have no destructive effect on the ozone layer and have less impact on the environment, more industries and fields will start to use Halogen Free Refrigerants in the future.

Halogen Free Refrigerants refer to refrigerants that do not contain halogen elements. Halogen elements include fluorine, chlorine, bromine, iodine, etc. These elements usually play the role of flame retardant and change the physical state of matter in refrigerants. However, halogen refrigerants have a destructive effect on the ozone layer and have a certain impact on the environment. Therefore, halogen-free refrigerants are seen as a more environmentally friendly alternative.

This report studies the global Halogen Free Refrigerants production, demand, key manufacturers, and key regions.
