Abstracts

The global Halosulfuron-methyl market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Halosulfuron-methyl is a selective herbicide for post-emergence control of sedges and other weeds in turf. It is also used on maize, sugarcane and rice. It interferes with the function of the acetolactate synthase enzyme, resulting in a rapid cessation of cell division and plant growth in both roots and shoots. In sulfite-sensitive individuals, skin reactions have been reported following dermal exposure.

This report studies the global Halosulfuron-methyl production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Halosulfuron-methyl, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
