## Abstracts

The global Hamburger Patty Maker market size is expected to reach \$ 587 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Hamburger patty makers are food processing equipment specifically designed to automatically press minced meat or plant-based protein raw materials into standard round hamburger patties. The core objective is to achieve consistent weight, regular shape, compact structure, and high production efficiency. In 2025, global Hamburger Patty Maker production reached approximately 51,000 units, with an average global market price of around 8000 US\$/ Unit. The production capacity of Hamburger Patty Maker reaches 63,800 units, and the industry's gross profit margin is approximately between 30% and 50%.

The market demand for hamburger patty makers continues to expand, primarily driven by multiple factors including the standardization of the global fast food industry, rapid growth in the consumption of pre-prepared and frozen foods, rising labor costs, and increasingly stringent food safety regulations. Chain restaurant brands have imposed stringent requirements on the weight, shape, and cooking consistency of hamburger patties, prompting supply chain companies to accelerate the adoption of automated forming equipment to replace traditional manual operations. At the same time, central kitchens and food processing plants are introducing high-precision, high-efficiency forming machines to achieve large-scale production in order to increase production capacity, reduce waste, and meet hygiene certification standards.

This report studies the global Hamburger Patty Maker production, demand, key manufacturers, and key regions.
