According to our (Global Info Research) latest study, the global Hammer Lock market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A hammer lock is a specialized stopper device designed for carts that do not come equipped with a standard stopper. It's an alternative to traditional caster stoppers and is often customized for specific cart models. The hammer lock mechanism can be engaged or disengaged by stepping on a lever with the foot.

Hammer locks are particularly useful for carts and carriers lacking built-in stoppers. By attaching these external locks, they effectively function as stoppers, enabling the user to secure the cart in place. The lock is usually located near the cart's wheels and is foot-operated.

Given the daily use of dollies and carts at work sites, the absence of a stopper can pose safety risks, especially if a loaded cart begins to move unexpectedly. Therefore, hammer locks serve as crucial safety features for carts without inherent stopper mechanisms.
