## Abstracts

According to our (Global Info Research) latest study, the global Hand Drill market size was valued at USD 849.9 million in 2023 and is forecast to a readjusted size of USD 1186.4 million by 2030 with a CAGR of 4.9% during review period.

A hand drill is a simple tool used to ignite a pile of dried tinder. Because hands create less friction than a bow drill, this method is only effective in hot climate when wood is very dry.

Hand tools are tools and equipment that are not electrically powered. These tools are used in everyday gardening, farming and framing. Since these tools are manually operated, their application is limited to certain tasks and skills. Moreover, the major factors driving the growth of the hand tools market include increasing demand from the automotive repair industry and technological advancements in the production of hand tools. Moreover, increasing use of hand tools in industrial applications is another factor driving the overall market growth. However, low profitability due to intense competition and lack of skilled professionals are some of the key challenges restraining the growth of the global hand tools market. Moreover, the rise in popularity of power tools and multi-functional applications is expected to hamper the growth of this market over the forecast period. Moreover, the recovery of the construction industry is expected to drive the demand for hand tools. According to our study, the global hand tools market size is estimated at USD 25 billion by 2022.
