This report studies the Hand Geometry Biometric market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Hand Geometry Biometric market by product type and applications/end industries.

Security has been a key concern for enterprises, banks, government organizations, telecommunication and hospitals as well as for individuals to secure data and assets. Keys, identity badges, and numeric keypads are used to prevent unauthorised access. Hand geometry biometrics deals with the structure of palm and fingers of an individual, width of the fingers, and thickness of the palm. Hand geometry scanners with infrared light and reflectors can be used for capturing the image. Since these features of an individual are not unique, hand geometry biometrics is not considered to be a fruitful method for the identification and verification of individuals. However, organizations are integrating hand geometry biometrics with smart cards to ensure improved verification of individuals. Multimodal biometrics is also another technique that is being used for authenticating individuals.

Owing to the public acceptance of biometric systems across the globe, the execution of this biometric technology in numerous end use industries has added extra value in last few decades. In addition, this hand geometry biometrics technology is a major invention of the global biometric technologies industry. There are numerous key features has
