Cold pressure welding is a method of welding copper-aluminum wires and alloys by applying pressure without using electricity, heat, fillers and fluxes during welding. Under the action of concentrated pressure load, the surface area of the two contact surfaces that need to be connected is enlarged, and the expansion of the area causes the original protective film on the surface that hinders welding to rupture, and the external force load makes the exposed pure metal matrix closely contact, thus producing a new one. Combination between atoms, continue to apply force to achieve welding.
