According to our (Global Info Research) latest study, the global Hand Rehabilitation Training Robot market size was valued at US\$ 336 million in 2025 and is forecast to a readjusted size of US\$ 507 million by 2032 with a CAGR of 6.1% during review period.

In 2024, the global production of hand rehabilitation training robots reached 755,400 units, with an average selling price of US\$420 per unit. The annual production capacity of a single line for hand rehabilitation training robots is approximately 60,000 units, with a gross profit margin of approximately 33.5%. Hand rehabilitation training robots are medical devices designed to assist patients in the rehabilitation of their hands and upper limbs. These robots are commonly used in the rehabilitation treatment of patients with stroke, brain injury, hand trauma, or other conditions leading to hand dysfunction. Upstream raw materials for hand rehabilitation training robots include aluminum alloys, high-strength plastics, carbon fiber, force sensors, etc. The midstream consists of hand rehabilitation training robot manufacturers, while the downstream mainly focuses on medical and home applications.

The market for hand rehabilitation training robots is experiencing rapid growth. With an aging population, the number of patients suffering from hand dysfunction due to stroke, hand injuries, and nerve damage is increasing, leading to a surge in rehabilitation demand. China has over 28 million stroke patients, and 55%-75% of survivors suffer from residual hand dysfunction, with over 1.5 million new patients annually, making hand function rehabilitation a necessity. Hand rehabilitation training robots combine AI algorithms, brain-computer interfaces, and virtual reality technologies to provide personalized rehabilitation plans. For example, they can decode brain signals to enable thought-controlled hand movements, improving rehabilitation outcomes. The devices

are also developing towards being lightweight and wearable, facilitating home and community use and reducing medical costs for patients.
