Abstracts

According to our (Global Info Research) latest study, the global Hand Soldering Iron market size was valued at USD 596.8 million in 2022 and is forecast to a readjusted size of USD 704.2 million by 2029 with a CAGR of 2.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Automated assembly processes and automation equipment used in surface-mount technology (SMT) — such as pick-and-place robotics as well as wave and reflow soldering — have enabled rapid evolution in the electronics industry toward HDI PCBs and the miniaturization of components. The increasing use of automation has improved efficiencies and reduced manufacturing costs. It is also moving electronic assembly manufacturing closer to Industry 4.0, where data is fully documented, for full traceability, with lights-out manufacturing. Despite this continuous movement, hand soldering is still necessary and still plays a key role in the manufacturing of electronic devices. Certain specialty, irregular, or heat-sensitive components must be hand soldered. With automation fulfilling the majority of electronic assembly operations, the remaining hand-soldering operations have become more challenging, requiring higher skilled soldering technicians, improved process controls, and advanced hand-soldering tools and equipment. With the advancement of basic technology and the upgrading of terminal requirements, the need for manufacturers to reduce costs, the shape, electrical performance, and precision have been rapidly changing. Correspondingly adapt to the changes in the object, thereby promoting the Hand Soldering product technological level.

Hand soldering is to connect two points. These points can be component or PCB layer

or wire. Hand soldering melts a metal wire, called solder, and flows over the two points. Hand Soldering Iron is powered by electric power, which heats a rod, on tip of which the solder melts and helps to join. On cooling the points are together as solid. Soldering helps to connect electronic components to perform many functions.
