Abstracts

The global Handheld Acoustic Imaging Camera market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An acoustic camera is an imaging device used to locate sound sources and to characterize them. It consists of a group of microphones — also called microphone array — that are simultaneously acquired to form a representation of the location of the sound sources. With this method the sound signal is shown and also a sequence of acoustic images can be acquired as acoustic videos are generated at same time.

This report studies the global Handheld Acoustic Imaging Camera production, demand, key manufacturers, and key regions.
