According to our (Global Info Research) latest study, the global Handheld Ammonia Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Handheld ammonia gas detector is a portable device designed to detect and measure the concentration of ammonia gas in the air. It is commonly used in industrial settings, such as fertilizer plants, refrigeration systems, and food processing facilities, where the potential for ammonia leaks or releases poses a safety hazard to workers and the environment. The detector typically uses electrochemical sensors or infrared sensors to detect the presence of ammonia gas in the air. The electrochemical sensor works by reacting with the ammonia gas to produce an electrical signal, which is then converted into a concentration reading.
