Abstracts

The global Handheld Corona Surface Treater market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

A Handheld Corona Surface Treater is a manually operated surface-treatment device that generates a high-frequency, high-voltage corona discharge through a handheld electrode or treatment head under atmospheric conditions. The discharge activates localized surfaces of plastics, rubber, glass, composites and coated materials, increasing surface energy and improving the wettability and adhesion of inks, adhesives, coatings, sealants and laminates. In 2025, global Handheld Corona Surface Treater production reached approximately 6.92 K Units. The upstream supply chain consists of high-frequency oscillation circuits, high-voltage transformers, power semiconductors, control boards, relays and protection devices, together with conductive electrodes, high-voltage insulation materials, insulated handles, high-voltage cables, flame-retardant enclosures, connectors and thermal-management components. Because the equipment operates under high-voltage and high-frequency conditions, insulation integrity, electromagnetic compatibility, overcurrent protection, short-circuit protection, grounding and operator safety are critical design requirements.

The global Handheld Corona Surface Treater market is a relatively small but highly specialized segment of the surface-modification equipment industry. Demand is primarily generated by laboratory research, material testing, process validation, low-volume production and on-site rework applications. Compared with in-line corona treatment systems, handheld units offer compact size, operational flexibility, limited installation requirements and the ability to treat curved surfaces, edges, recesses and irregularly shaped components. They are particularly suitable for localized surface activation of plastics, rubber, glass, composites and microfluidic devices prior to

printing, coating, adhesive bonding, sealing or lamination.
