According to our (Global Info Research) latest study, the global Handheld Cup Anemometer market size was valued at US$ 509 million in 2024 and is forecast to a readjusted size of USD 794 million by 2031 with a CAGR of 4.7% during review period.

HandheldCup Anemometer is a portable device used to measure wind speed and, in some models, wind direction. It features a cup assembly, typically comprising three or four cups attached to a horizontal spindle, which rotates in response to the force of the wind. The rotation of the cups is then translated into an electrical signal through a sensor or generator mechanism, allowing the anemometer to display the wind speed numerically on a built-in LCD screen or other display.
