A handheld electrocardiogram monitor is a portable medical device used to monitor and record the electrical activity of the heart. It usually consists of a handheld device and a set of electrodes, which can convert the electrical signals of the heart into digital signals, and then display them through a built-in processor and display screen. A handheld electrocardiogram monitor can usually record indicators such as electrocardiogram, heart rate, and heart rhythm, and can also store, transmit, and analyze data, making it convenient for doctors to diagnose and treat. The handheld electrocardiogram monitor has the characteristics of small size, light weight, and easy to carry, and is suitable for various occasions, such as emergency, outpatient, home, etc. It can quickly obtain electrocardiogram signals, assist doctors in preliminary electrocardiogram diagnosis, and also provide convenience for daily monitoring of heart disease patients. The emergence of handheld electrocardiogram monitors has made electrocardiogram monitoring technology more popular and convenient, providing new choices for clinical medicine and health management.
