A handheld grinder is a portable grinding and polishing device, usually composed of a motor, a grinding disc (or a grinding head), a protective cover, a power cord (or a built-in battery), and other parts. The handheld grinder relies on a motor to drive the grinding disc or grinding head to rotate at high speed, thereby grinding, crushing, and mixing the sample. Handheld grinders are widely used in laboratories, scientific research, medicine, chemical industry, and other fields. In the laboratory, it is often used to grind and mix various samples, such as animal tissue samples (liver, spleen, brain tissue, heart, bone marrow, large intestine, etc.), plant tissue samples (roots, leaves, flowers, fruits, etc.), microbial samples (bacteria, yeast, etc.), and food and medicine grinding, crushing, and homogenization. In addition, handheld grinders are also often used for surface treatment of on-site samples to obtain a smooth and uniform sample surface.
