## Abstracts

The global Handheld Parking Charge Machine market size is expected to reach \$ 3534 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Global sales of handheld parking charge machines reached 2,095,000 units in 2025, with an average price of \$986 per unit.

Handheld Parking Charge Machine can meet kinds of needs , like cards pay, QR Code pay, ID verification, info management, data transmission, receipt/ticket/lottery/coupon printing.

The main components of a handheld parking charge machine include an industrial-grade computing motherboard, an ARM/X86 processor, a 7-10 inch high-brightness touchscreen, a high-capacity lithium battery pack, a thermal printer core, a 2D barcode scanning engine, a multi-band communication module, a metal/engineering plastic casing, and various connectors. Of the total cost, core chips (main control SoC, communication baseband) and industrial displays account for 35%-45%, batteries and printer modules for 15%-20%, structural components and auxiliary materials for 20%-25%, and software licensing and assembly testing for 10%-15%. Due to the stringent requirements of 24/7 outdoor continuous operation, a wide operating temperature range of -20? to 60?, and rain and dust resistance, its hardware cost is significantly higher than that of consumer-grade PDAs. In recent years, with the maturity of domestic chip and display technologies, the cost of core components has been declining. However, high-precision printer mechanisms and automotive-grade communication modules still mainly rely on imports, representing a key breakthrough point for cost optimization.

This report studies the global Handheld Parking Charge Machine production, demand, key manufacturers, and key regions.
