The global Handheld Petrol Cutter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The handheld petrol cutter is a cutting device driven by a fuel engine. It converts the energy generated by fuel combustion into power through an internal combustion engine, and cuts materials of different hardness and thickness through the blade. The main components of the handheld petrol cutter include the engine, blade, guard plate, handle, fuel tank, etc. When in use, you need to add enough fuel and press the start button to start the engine. Then the hand-held machine positions the material to be cut, and adjusts the cutting depth and direction according to the needs. It has the characteristics of strong power, wide application range, flexibility and portability, and strong durability.
