Abstracts

According to our (Global Info Research) latest study, the global Handheld Pruning Shear market size was valued at US\$ 2121 million in 2025 and is forecast to a readjusted size of US\$ 3193 million by 2032 with a CAGR of 6.1% during review period.

Handheld pruning shears are portable tools used for pruning trees, shrubs, and horticultural plants. They feature sharp blades and ergonomically designed handles, allowing for precise pruning in gardens, orchards, and other similar settings. Whether manually or electrically driven, they are suitable for trimming thinner branches, vines, and other foliage, helping plants maintain healthy growth and an attractive shape. Due to their lightweight and easy-to-control characteristics, handheld pruning shears are widely used in horticultural maintenance, landscaping, and agricultural management.

The upstream of the handheld pruning shears industry chain mainly includes the supply of raw materials and components, such as high-carbon steel or stainless steel blades, aluminum alloy or engineering plastic handles, springs, rivets, and anti-rust coatings. The midstream involves the manufacturing and assembly of the entire machine, including blade forging and heat treatment, precision grinding of the cutting edge, surface anti-corrosion treatment, handle injection molding or die casting, and overall assembly and quality inspection. This segment is technologically mature and highly competitive, with gross profit margins typically ranging from 20% to 40%. Branded products with high-end ergonomic designs and strong durability have relatively higher gross profit margins. The downstream segment comprises sales and application channels, including garden tool dealers, agricultural supply stores, hardware and building materials markets, e-commerce platforms, and direct sales to end users such as home gardeners, orchard growers, municipal greening, and garden maintenance

workers. Channel coverage and brand influence have a significant impact on sales volume and profit levels.

In 2025, the average price of handheld pruning shears was \$8 per unit, with sales reaching 257.63 million units.

As an important part of gardening tools, handheld pruning shears significantly improve the convenience and accuracy of pruning work with their lightness and efficiency. Whether it is the traditional manual model or the modern electric pruning shears, they can help gardeners and amateurs easily handle the pruning needs of plants and maintain the healthy growth of plants. Electric pruning shears are particularly suitable for large areas or heavy pruning work, saving manpower and time. However, manual pruning shears are more suitable for small operations, with good control and operational flexibility. Both have their advantages, and the choice should be based on the actual use and pruning frequency.
