Handheld TDS Meter is a portable instrument used to measure the total dissolved solids (TDS) content in water. TDS represents the total concentration of all minerals, salts and organic matter dissolved in water, usually in ppm (parts per million) or mg/L. The device measures the conductivity of water and converts the conductivity value into TDS value using a specific algorithm to provide basic information on water quality. Handheld TDS Meter is widely used in households, agriculture, industry, laboratories and other fields for testing the water quality of drinking water, fish tank water, swimming pool water, industrial wastewater, etc. due to its small size, easy to carry and simple operation.
