Infrared thermal imaging technology has applications in both military and civilian areas. It originated from military use and gradually turned to civilian use. It is generally called a thermal imager in civilian use, and it is mainly used in research and development or industrial inspection and equipment maintenance, and it is also widely used in fire prevention, night vision and security. In layman's terms, a thermal imager converts the invisible infrared energy emitted by an object into a visible thermal image. Different colors on the top of the thermal image represent different temperatures of the measured object.
