Abstracts

According to our (Global Info Research) latest study, the global Handheld Thermocouple Probe market size was valued at US\$ 515 million in 2024 and is forecast to a readjusted size of USD 716 million by 2031 with a CAGR of 4.9% during review period.

Handheld Thermocouple Probes come in a wide variety of configuration builds. Each build comes with its own accessories to meet any situation and application. These builds include general purpose probes, penetration point probes and surface probes. As well as standard, micro, and heavy-duty probes. Probes with a penetration point are used often as a food grade thermocouple. All handheld probes feature color-coded ANSI components. These include type J, K, T and E. Handheld probes also come with their own specified handle type. Handle types come in a standard plastic BLAZE handle, a mini stainless steel handle, and a high-temp heavy duty stainless steel handle.

The petrochemical industry, or petrochemicals for short, generally refers to the chemical industry that uses oil and natural gas as its raw materials. The sudden global outbreak of New Crown Pneumonia in the early 2020's delivered a huge blow to the petrochemical industry, with the International Energy Agency predicting at the beginning of the 2020's that global demand for oil in 2020 would fall by 8.1 million barrels per day (bpd). This is the first annual decline in global oil consumption since 2009 and the financial crisis. global refined oil product consumption fell by nearly 30% in the first quarter of 2020, and global oil supply in the second quarter showed the largest single-quarter supply surplus ever. As a result, the market size of petrochemicals in 2020 declined to a certain extent, with the global petrochemicals market size of \$422 billion in 2020, a year-on-year

decline of 4.3%.2022 In the second half of the year, due to the fall in crude oil prices and shrinking downstream demand, the overall profit of the petrochemicals industry has been significantly narrowed, and a number of enterprises have also incurred losses. The stability of the global trade supply chain has been tested to a certain extent after the New Crown Pneumonia epidemic, and many countries have begun to shift important resources, such as petrochemicals, to local areas after realizing the weak ability of the globalized trade supply chain to resist huge risks.
